

HOW TO CUT CIRCLES

1. Cut a half circle.
2. Place your finger over that half circle.
3. Lift up your knife, go back to the beginning of your cut and cut the rest of the circle out.
4. Practice! Practice! Practice!

First, cut out half of a circle.

Then, put your finger over that first half you cut. Lift up your blade, bring it back to the beginning of your circle and cut out the rest. See my stumpy hand, I lost three of the fingers on my left hand from a horrible papercutting accident. Okay, not really, my technical drawing isn't the greatest.

PRACTICE!

Try cutting out these circles.
